

Green Valley General Hospital - Patient Safety Report

Document ID: SAFE-2026-02

Department: patient_safety

Document Date: 2026-02-10

Patient Safety Review

The patient safety committee reviewed medication dispensing performance during January and early February 2026.

The pharmacy department previously operated with a target dispensing time of 30 minutes for standard medication orders.

Several delays were identified during peak operating periods.

The committee recommended reducing the dispensing target to 20 minutes for standard medication orders.

The recommendation should be reviewed alongside the updated pharmacy policy before being treated as the current operational requirement.
