Document Date: 2026-03-18

Quality Improvement Committee

Meeting Date: March 18, 2026

The committee reviewed pharmacy dispensing performance and patient safety observations.

The previous 30-minute dispensing target was considered insufficient during periods of high demand.

The committee supported the March pharmacy policy update that reduced the standard dispensing target to 20 minutes.

The change was motivated by medication safety concerns, operational delays, and the goal of improving patient flow.

The committee recommends monitoring compliance with the 20-minute target during the next quarterly review.
